Falcons (11-5)	0	21	7	0	0	28

SUPER BOWL LI

Motivation

- We want to build a social app that focuses on game data sharing.

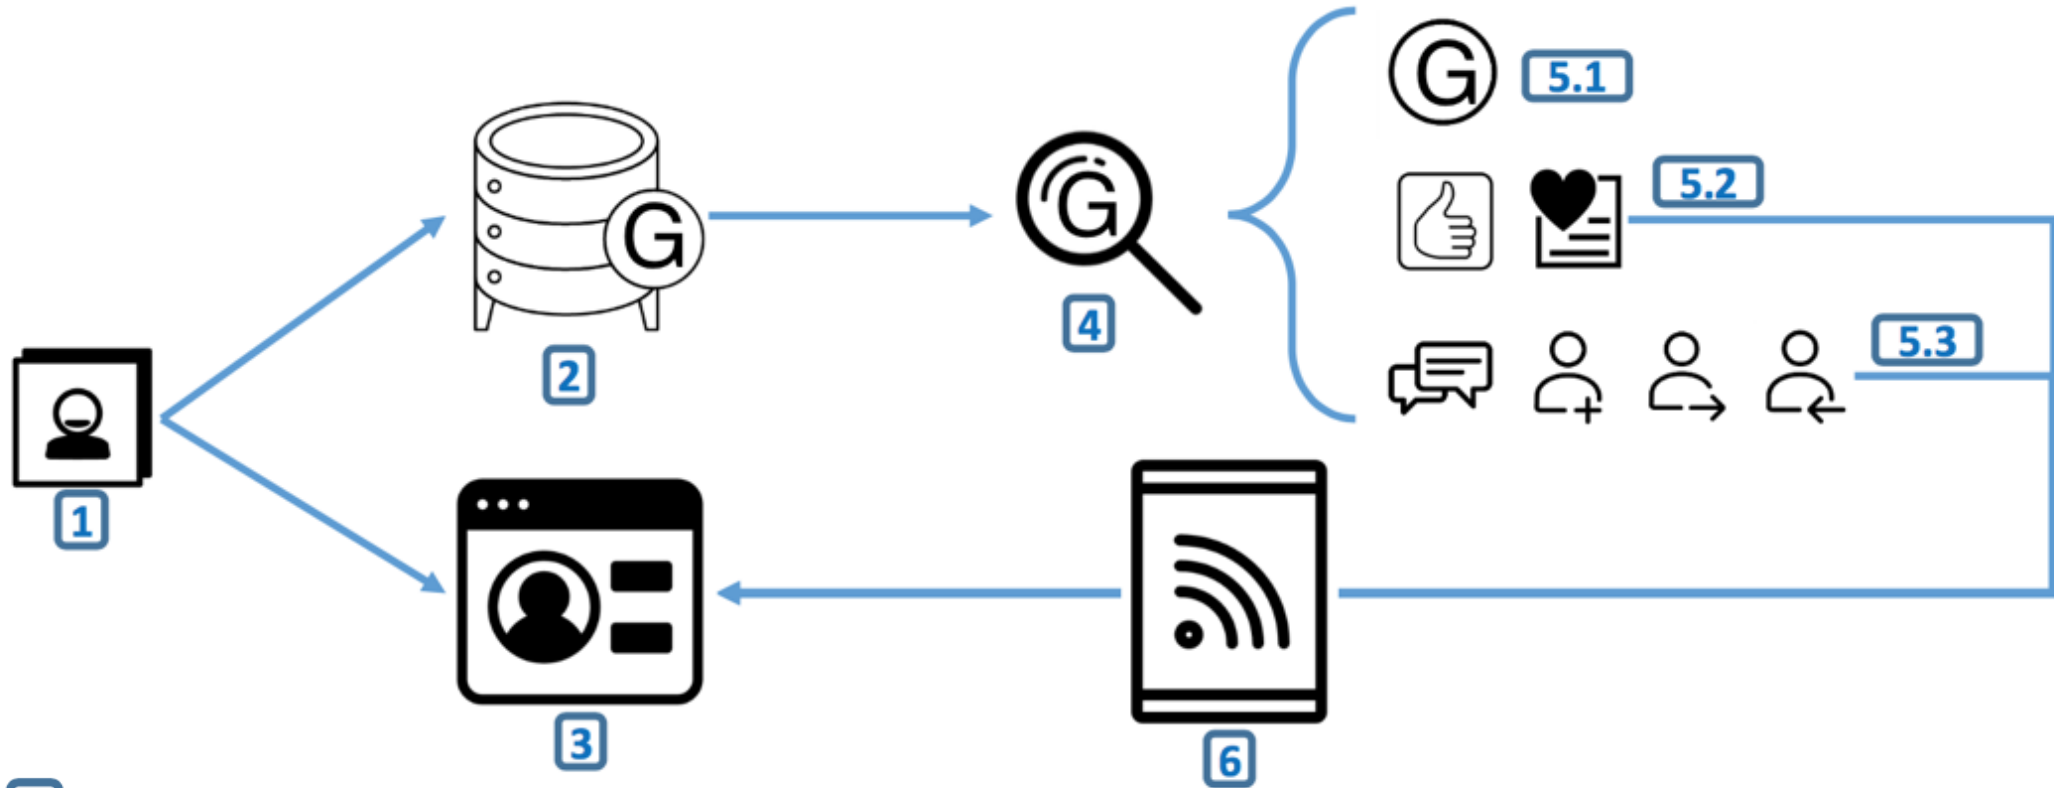

When I catch up with the newest game-news (such as DOTA, LOL, NBA and NFL), it would be great if I can read comments from others, and also leave my comment on it ,and share my thoughts with others.

Besides, I hope there will be small bets before a game playing, which make the app more funny and interactive. if your bet is right, you will earn some point to exchange for little gifts (such as medals, achievements, decorations for your account icon) and you will also earn "EXP" to get a level up in the app. Losing bets will make u lose point but not "EXP".

Everyone has a homepage. My homepage keeps track of all comments and bets I've made, and show me all the achievement and points I've earned, and feeds me new information from my followings.

There exists so many great game-news apps in market, but they just give the users the news, none of them does exactly what we described above. To demo our idea, we are going to build a prototype on our own – *A Game plus*.

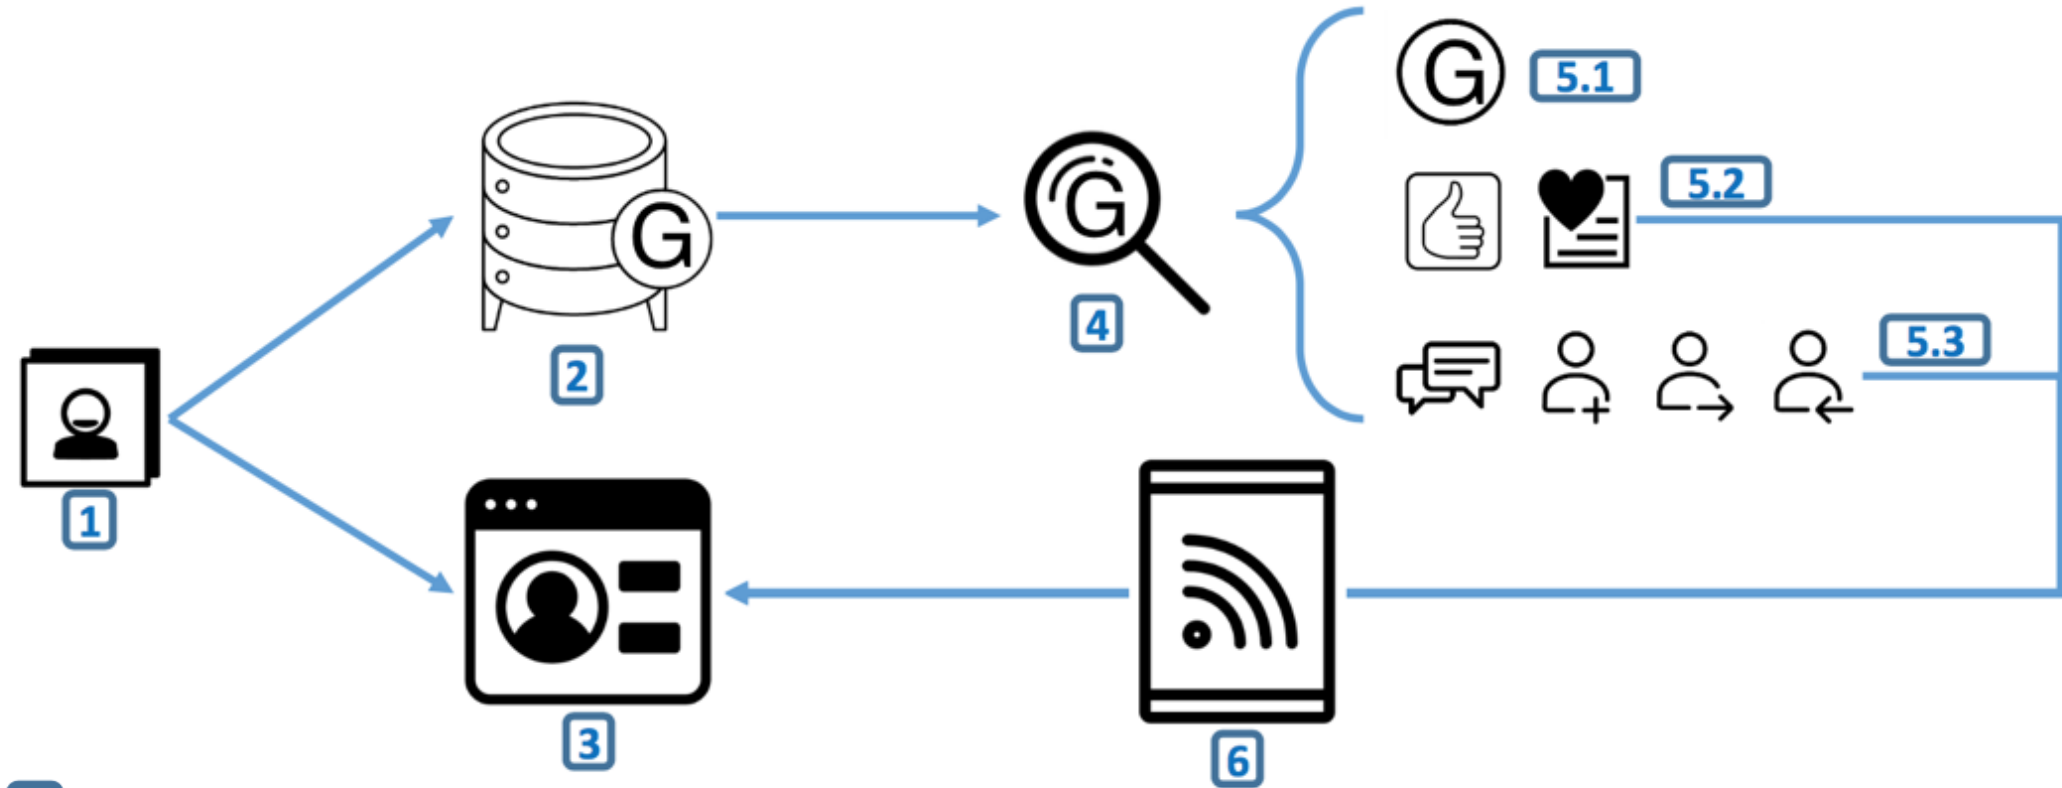

App Description

1

The Game Plus prompts first time users to create their account using username and password. Returning users log in using their credentials.

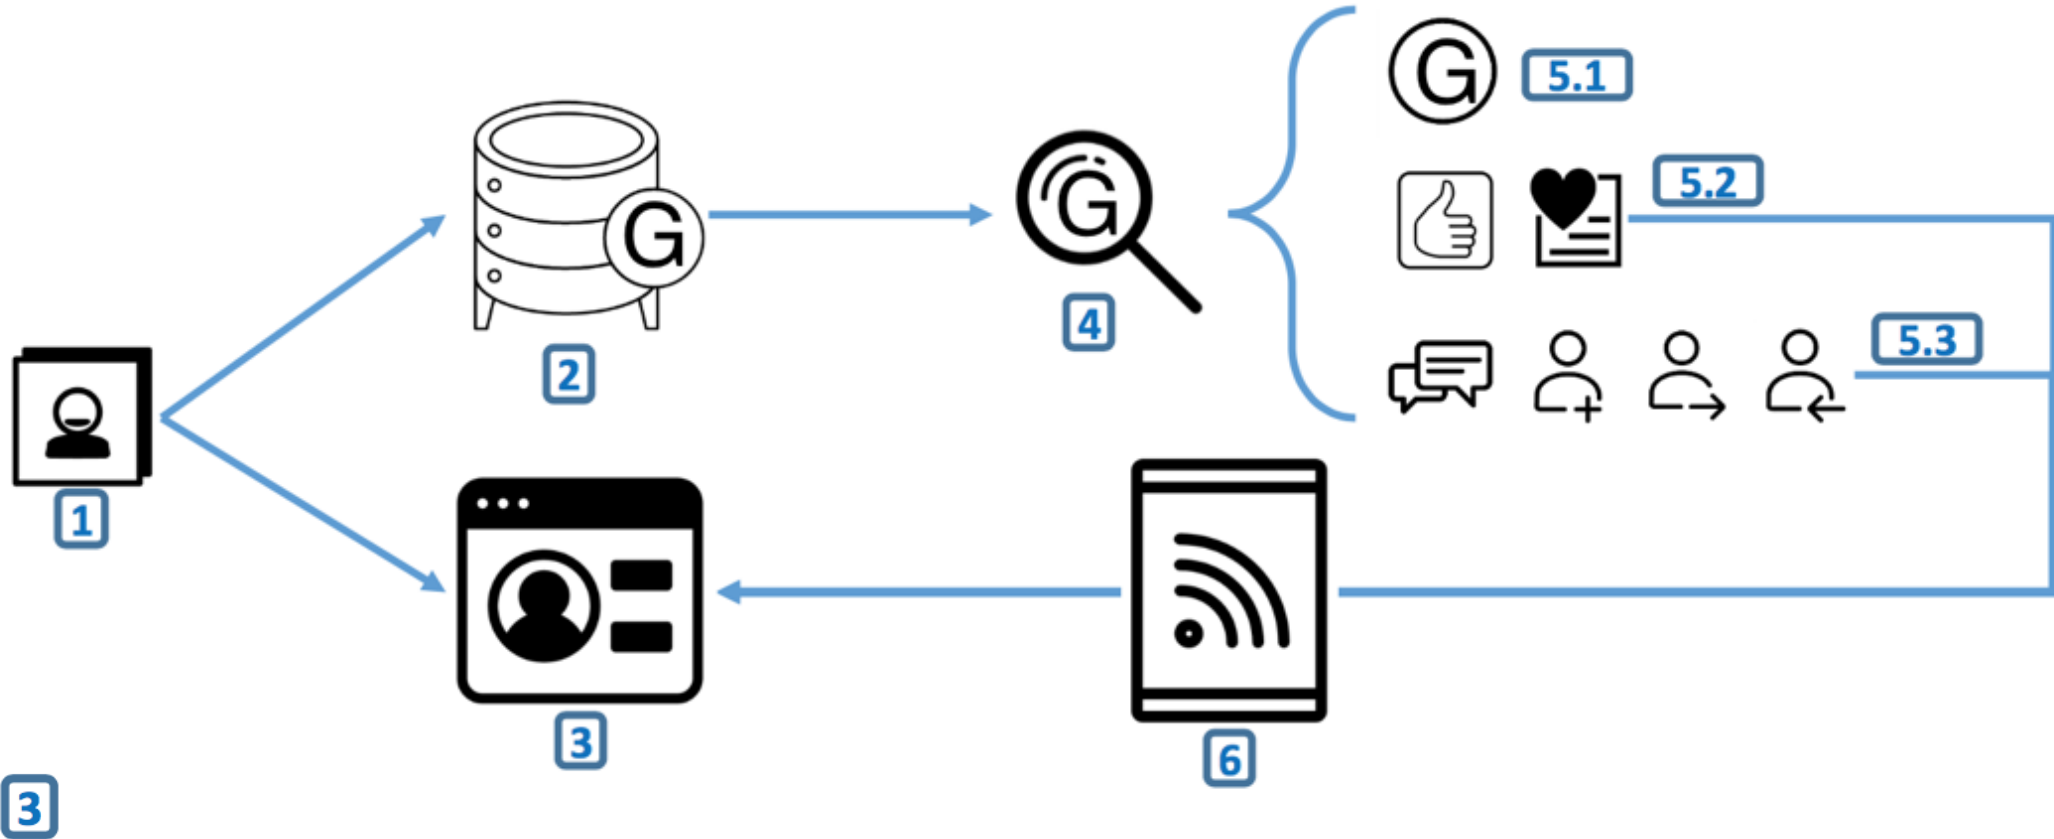

App Description

2

Logged in users can use the Game plus to search the game news database

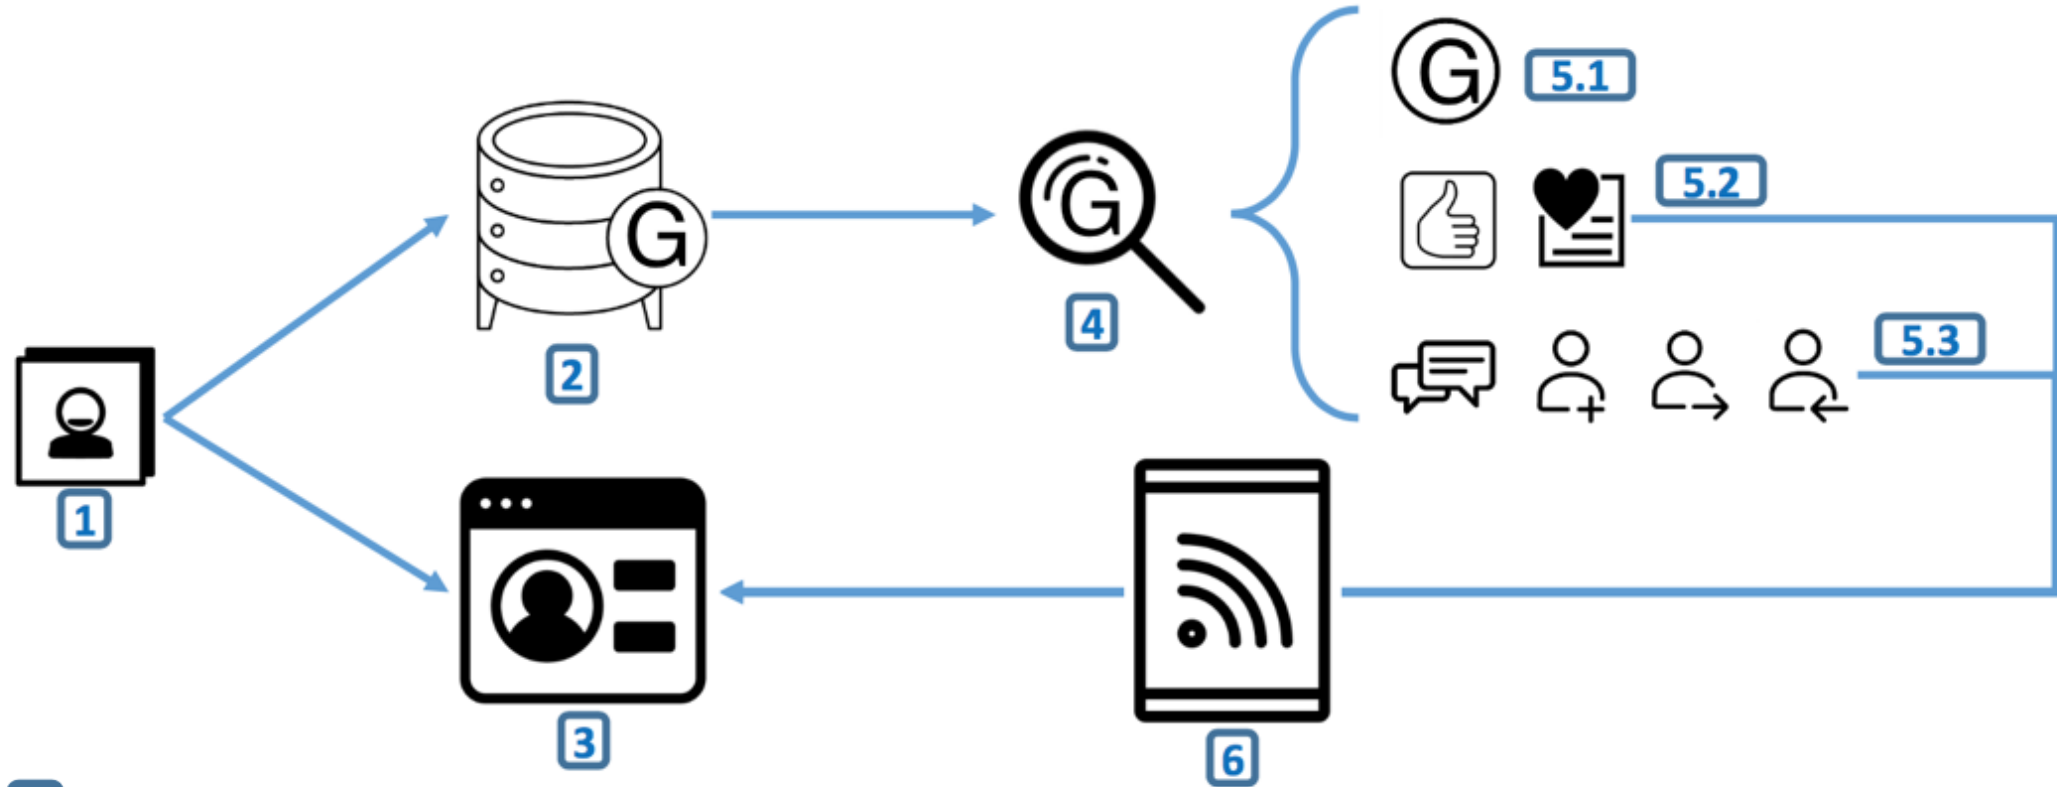

App Description

3 User profile is managed by our database.

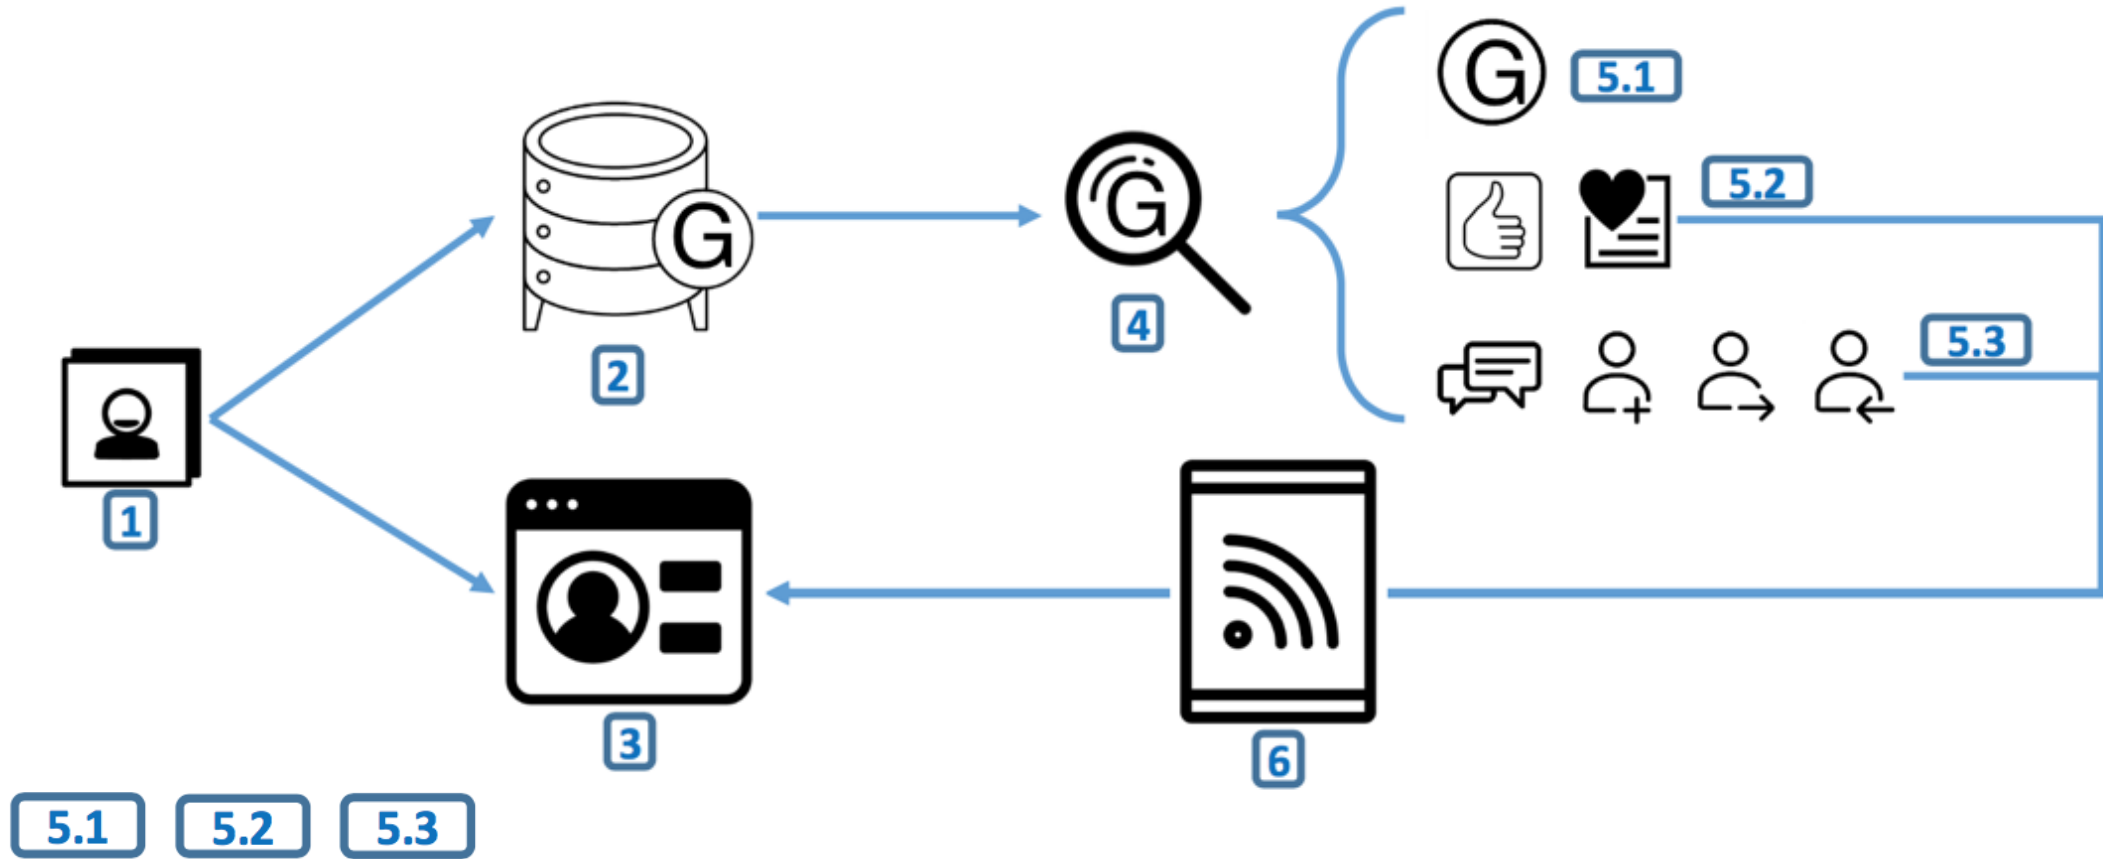

A user profile contains username, self intro, basic info, game list, followings, followers, comments made, posts, account icon and decoration, level etc.

App Description

Search games news and updating scores

App Description

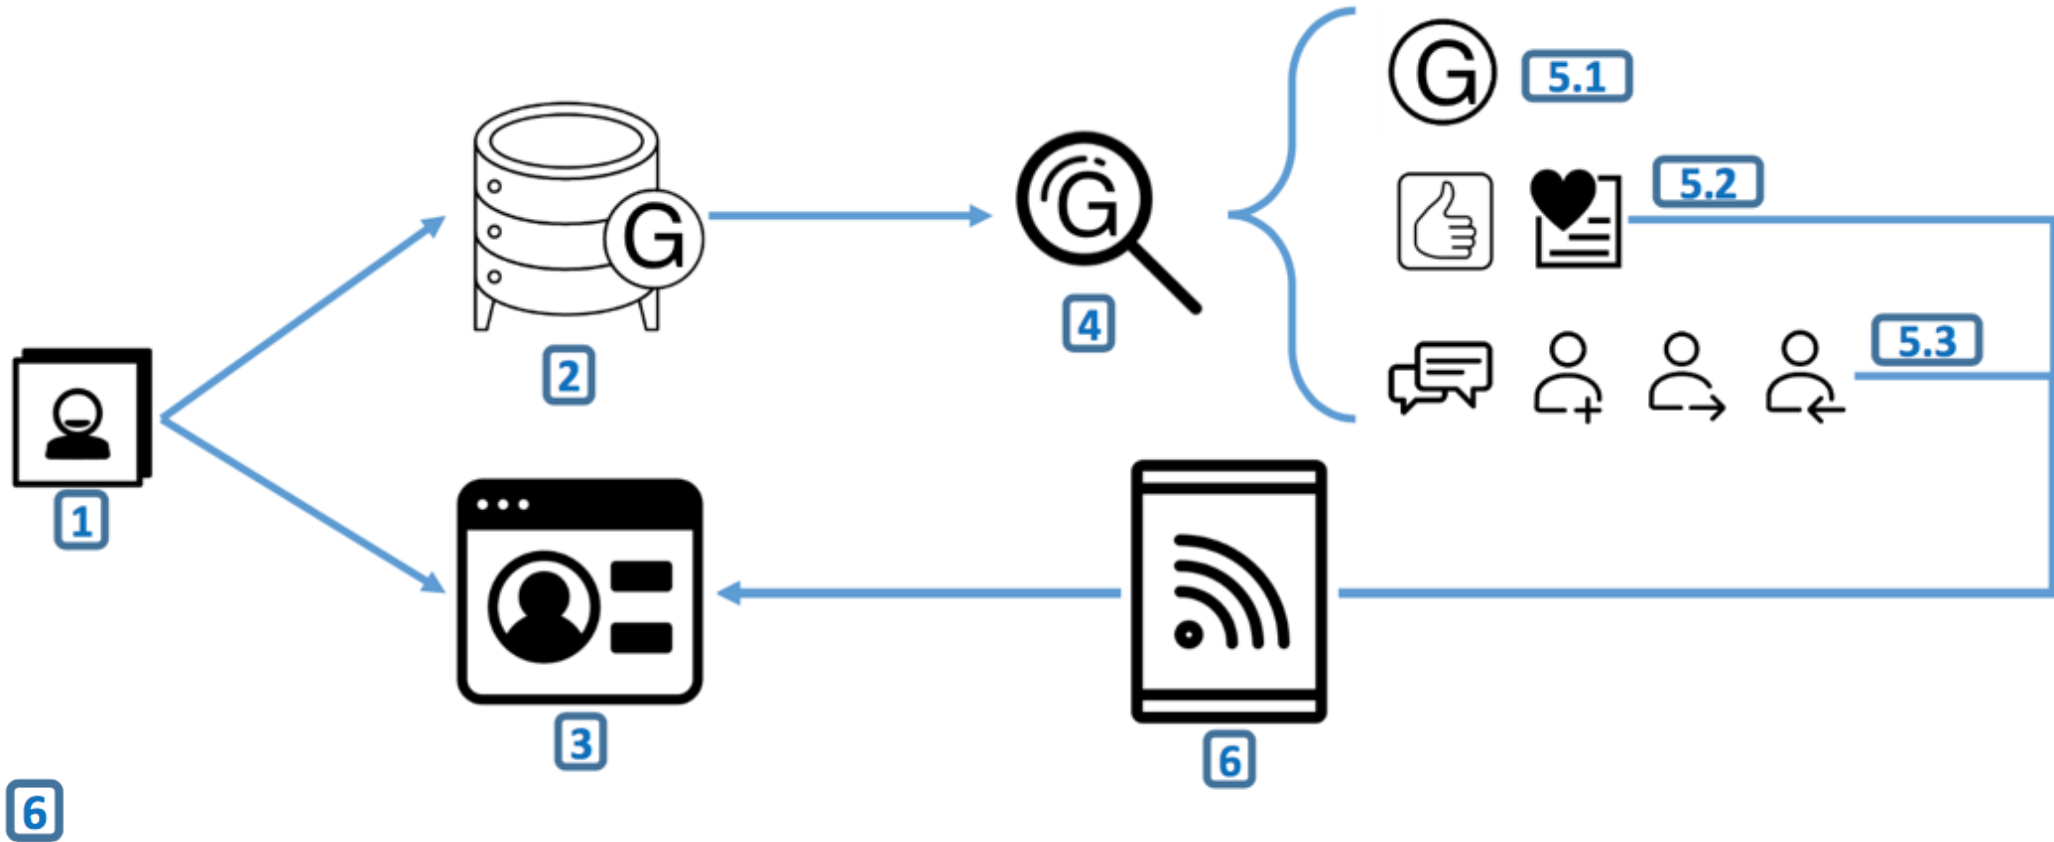

1. Show user the newest scores.

2. User can like a game, and then the game will be added to the user's favorite-list. The list can be managed in homepage.

3. Comments for each game are managed and retrieved from our database. Users can post comments and follow others. Bets are extremely fun. Gain EXP, earn point and exchange gift & achievements !

App Description

User activities such as *like*, *comment* and *follow* are stored into our database, thus will feed to the homepage.

Mockups

A hand-drawn mockup of a mobile application login screen. The interface is contained within a rectangular frame representing a phone screen. At the top, a status bar shows signal strength, 'NM', a Wi-Fi icon, the time '3:58 AM', and a battery icon. The main content area features a large, hand-drawn soccer ball icon in the center. Below the icon, the text 'Username:' is followed by a text input field containing 'GSE438'. Underneath, the text 'Password:' is followed by a text input field filled with ten asterisks. A prominent orange rectangular button with the text 'Log In' is positioned below the password field. At the bottom of the screen, the text 'No account? Sign up now!' is displayed in a blue, handwritten font.

3:58 AM
